

Caratteristica principale di questa serie di pompe è la eccezionale versatilità di impiego. Possono essere usate nell'**INDUSTRIA CHIMICA** (Amido, Colla a base H₂O, Emulsioni, Glicoli, Glicerina, Lattice, Grassi vegetali e animali), **FARMACEUTICA** (Cera, Detergenti, Saponi liquidi, Creme, Sciroppi, Shampoo), **ALIMENTARE** (Vino, Uva d'India, Succhi di frutta, Salsa di pomodoro, Olio, Birra, Burro e Formaggi fusi, Panna, Latte e Latte condensato, Uova, Miele, Yoghurt, Marmellata, Zucchero liquido, Glucosio). Inoltre:

- La girante, in materiale sintetico, è perfettamente atossica e resistente a diversi acidi.
- Liquidi con corpi solidi in sospensione possono essere agevolmente pompati senza danno.
- Adescamento istantaneo fino a 5 mt. di profondità.
- Reversibilità del flusso.
- Il basso numero di giri del motore non provoca lo sbattimento del prodotto.

The main characteristics of this series of pumps is its exceptional versatility of use. The pumps can be used in the CHEMICALS INDUSTRIES (starch, water-based glues, emulsions, glycols, glycerine, saps, vegetable and animal fats), PHARMACEUTICALS INDUSTRIES (wax, detergents, liquid soaps, creams, syrups, shampoos), ALIMENTARY INDUSTRIES (wine, grapes, fruit juices, tomato juice, oils, beer, butter and liquid cheeses, cream, milk and condensed milk, eggs, honey, yoghurt, jams, liquid sugar, glucose).

Besides:

- The impeller, in synthetic material, is absolutely non toxic and resistant to some acids.
- Liquids and solids in suspension can be pumped without damage.
- Instant self-priming to 5 m. depth.
- Reverse flow mechanism.
- Low motor RPM to avoid beating of the product

La caractéristique principale de cette série de pompes est sa versatilité exceptionnelle d'application. Les pompes peuvent être utilisées dans les INDUSTRIES CHIMIQUES (amides, col à base d'eau, émulsions, glicole, glicérines, les huiles végétales et animales), les INDUSTRIES PHARMACÉTIQUES (cire, détergents, savons liquides, crèmes, sirops, shampoos), les INDUSTRIES ALIMENTAIRES (vins, raisins, jus de fruit, sauce de tomates, huiles, bières, beurre et fromages, crème, lait et lait condensé, œufs, miel, yogourt, confitures, sucre liquides, glucose, etc.).

En plus:

- Le rotoeur, en matériel synthétique, est parfaitement atoxique et résistant à divers acides.
- Les liquides à corps solides en suspension peuvent être facilement pompés sans quils s'abîment.
- Auto-amorçage jusqu'à 5 m. de profondeur.
- Réversibilité de direction du pompage.
- Nombre réduit de tours/minute du moteur pour ne pas frapper le produit.
